

How to Analyze Waterfall Charts (Part 2)

Here's what to look for when digging a little deeper into a waterfall chart for a failed run in Real Browser checks:

1. Run page and domain performance reports to see if this is regular behavior
 - a. E.g. If the alert was related to a timeout that began 2 days earlier, run a page performance report for 'page load time' for at least the past 1-2 weeks
2. Run an Uptime check to see if it exhibits similar load times
3. Check with your CDN provider to see if there were any issues during the affected timeframe
 - a. E.g. If Image, Javascript, or CSS resources are loading slowly in the waterfall chart
